

REQUEST FOR CLARIFICATION ON A TENDER: RWA23003-10014
--

Lot1-ITEM 9: Kindly clarify whether a Conference Audio DSP Processor with built-in AEC, Noise Reduction, AGC, Feedback Suppression, and USB audio interface is acceptable, or if a traditional Digital Audio Mixer is specifically required.

A Conference Audio DSP Processor may be proposed, provided it meets or exceeds all specified technical, functional and performance requirements specified in the tender documents, including, notably, the required channel capacity, connectivity, USB audio functionality, audio processing features (AEC, Noise Reduction, AGC, and Feedback Suppression), and all other stated performance requirements. The proposed solution should be fully compatible and interoperable with the other equipment offered as part of the complete solution.

Lot1-ITEM 12: Kindly clarify the required form factor "TV Stick". Since the requested equipment is described as a Wireless Presentation Pod, please confirm whether equivalent wireless presentation devices (e.g., presentation pods with transmitter/receiver architecture) are acceptable instead of a TV Stick form factor.

The reference to a "TV Stick" form factor is intended to indicate a compact wireless presentation device and should not be understood as prescribing a specific physical design or architecture.

Equivalent wireless presentation solutions, including transmitter/receiver-based systems, may therefore be proposed, provided that they meet or exceed all specified technical, functional and performance requirements specified in the tender documents, including, notably, connectivity, compatibility, transmission quality, supported resolution, ease of use and any other specified requirements.
